

Patient: Erin Johns

Date of exam

Exam type:

Findings

Chest x-ray taken portably in emergency department. Film was taken upright and A-P.

The x-ray shows characteristic signs of COPD with marked hyper-inflation throughout all fields and widen intercostal spaces. Heart appears elongated. Diaphragm is flattened bilaterally.

Recommendations: PA and lateral x-ray of the chest for further followup. Potential CT scan of the chest if patient history indicates an uncommon cause of exacerbation.

Signed

Dr. Roentgen, Radiologist
