

Patient: Erin Johns

Date of exam

Exam type:

Findings

Chest x-ray taken in department. Film was taken upright and PA.

The x-ray indicates poor inspiration in comparison to film taken in emergency 2 days ago. All lung fields show patchy infiltrates. Consolidation noted just distal to the right middle lobe fissure. Appearance of infiltrates indicates community acquired pneumonia.

Recommendations: Serial chest x-rays to follow disease condition. Potential CT scan if condition changes substantially.

Signed

Dr. Roentgen, Radiologist
